GLASS PACKAGE

The flexible foam spacer is the seal that keeps the glass package in windows and patio doors from failing. It is a dual-seal insulating glass system. This non-metal, structural foam spacer resists condensation, reduces energy costs, provides long-life durability and adds both comfort and value to your windows and patio doors.

The all foam formula:

- blocks the heat escape path
- improves sound absorption over traditional metal spacers
- lasts up to nine times longer in durability tests than single-seal units
- reduces effects of temperature changes, barometric pressure, window load and glazing pressure - resulting in less seal failure and fewer stress cracks
